

The Philips logo is displayed in a white rounded rectangle in the top left corner of the page. The background of the entire page is a photograph of a man in a dark suit and tie, looking intently at a medical monitor in a clinical setting. Another person in blue scrubs is partially visible in the foreground on the left, and another person in blue scrubs is on the right. The monitor shows a medical image with a green circle. The overall scene is brightly lit, typical of a hospital or clinic.

PHILIPS

Education

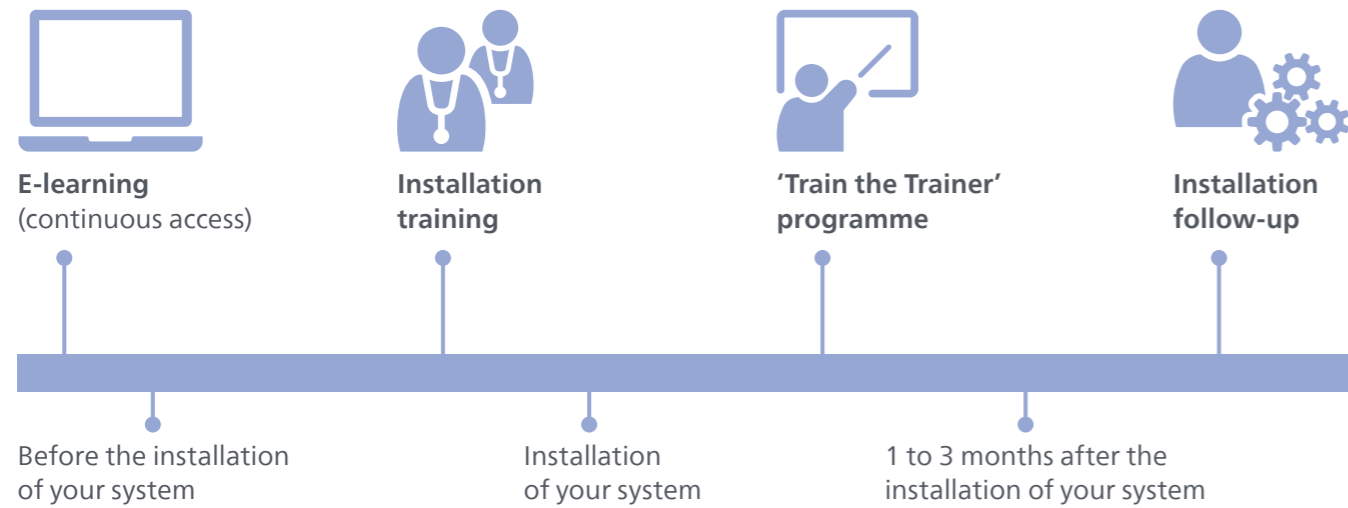

Professional Services: Education

Discover our education solutions designed to respond to your needs.

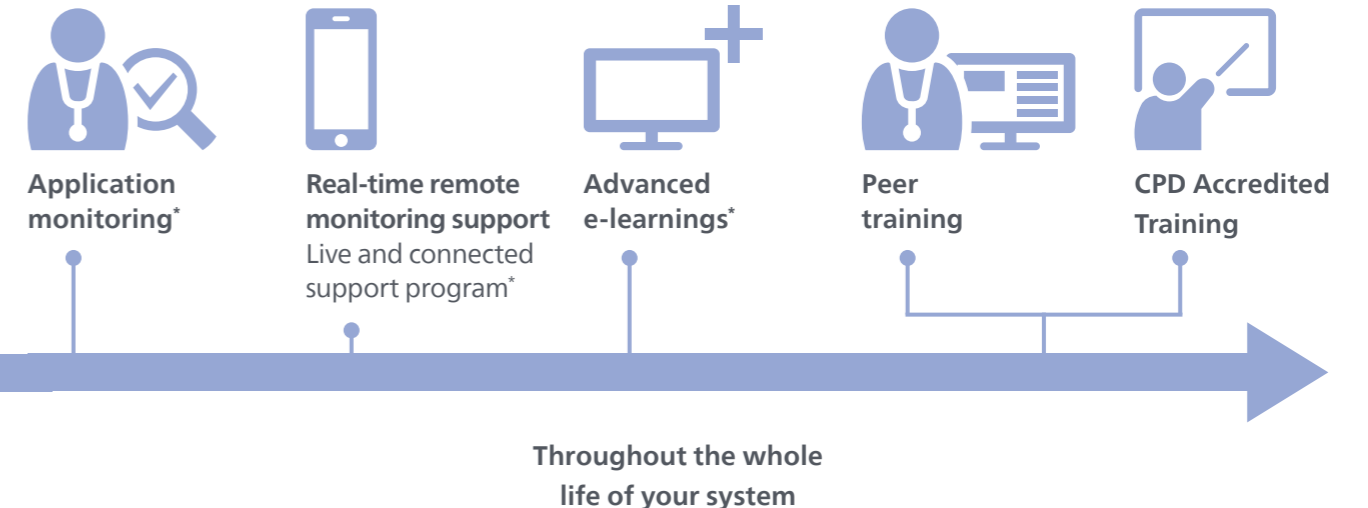

At Philips, we are committed to education and training to ensure you get the best out of your system. We have long recognised the need to have support staff that are true specialists in their field of expertise. Philips' portfolio has a range of offerings, tailored to different needs. Our goal is to partner with you to help you maximise clinical efficiency and improve patient safety.

Philips partners with you to support staff education and a smooth workflow.

Included with the purchase of the system

Additional education support services

E-learning

A continuous access to online modules, accessible throughout the entire life of your system, can be used before and after installation, especially when onboarding new starters.

Installation training

An Application Specialist will help you to get set-up and running, according to a tailor-made programme, first without patients, then gradually after go-live. The Application Specialist will customise your system and image quality to suit your requirements.

Installation follow-up

In a visit post go-live, our Application Specialist will go through the application after the first few weeks of use and run a refresher training. Your Application Specialist will answer any questions and ensure your system is configured to your clinical needs.

Train the Trainer programme

The training concept Philips employs, utilises a 'Train the Trainer' approach. This model has proved highly effective on projects giving the optimal mix between two contradicting requirements:

- 1) Ensuring that the users have access to all the skills and knowledge necessary to confidently use and maintain the system.
- 2) Keeping within the limitations placed on the radiology department in terms of time and staffing levels.

Our modular training content will enable you to learn using a method that suits you best. You can choose any of the below education activities.

Application monitoring*

This **tailor-made monitoring** is designed to optimise the advanced functionalities of the system and its intervention tools. It also makes it possible to respond to the team's problems, adjust image quality parameters, and help develop new practices.

Application monitoring*

Philips offer product specific software that allows you to connect to an Application Specialist via a **real-time remote** connection.

This module lets you extend your team without expanding it, because physical distance is no longer an obstacle. Provided by a secure access, this Philips license provides decision support and on-demand expertise in real-time via a smartphone, tablet or computer.

Advanced e-learnings*

This suite of e-learning modules will give you access to a number of advancement opportunities to **match the needs of your team**, and will vary based on the applications and clinical tools you have.

CPD Accredited Training

Some of our training courses offer continuous professional developed (CPD) accreditation, contributing to keep your skills and knowledge up to date.

Peer training

Peer-to-peer learning for physicians provides access to a clinical expert per the specified interventional tool, provides **recommendations and shares** his or her best practices during **live cases**.

*Availability of services may vary by imaging modality.
