Pushing the boundaries of imaging performance

Enhanced Image Quality

Automated Doppler Measurements

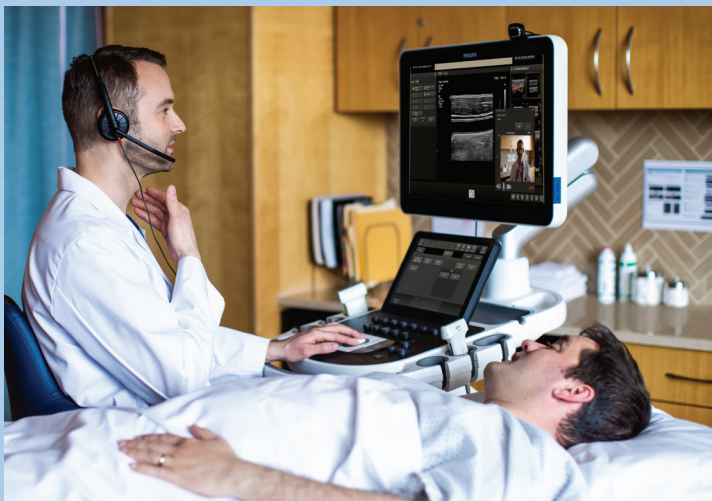

Automated 3D Assessment with Dynamic Heart Model

The X5-1c transducer is Philips newest next-generation echo transducer. The X5-1c has an ergonomic design and is smaller and lighter than the X5-1 transducer, contributing to increased scanning comfort. The unique curved lens of the transducer provides easy access to scanning windows, ensuring enhanced visualization.

Auto Measure uses AI technology to significantly reduce the time for standard 2D and Doppler measurements.

Dynamic Heart Model with Anatomical Intelligence (AI) provides accurate assessment of LV and LA within seconds at the touch of a button.¹
