

The Philips logo is displayed in a white rounded rectangle in the top left corner of the image.

State-of-the-art Hybrid Cath Lab installation at Leeds General Infirmary

Both staff and patients can benefit from the new state-of-the-art Hybrid Cath Lab, now operational at Leeds General Infirmary. This was installed as part of the Managed Service Agreement between Leeds Teaching Hospitals NHS Trust and Philips. The system provides the benefits of Dynamic Coronary Roadmap, a Philips-exclusive technology which creates a motion-compensated, real-time view of coronary arteries and HeartNavigator, providing insightful planning and guidance for Structural Heart Disease procedures.

Azurion 7, with integrated IntraSight platform, brings together a range of sophisticated interventional devices, including imaging and physiology tools, to support clinical excellence during cardiac procedures. This will assist the cardiology team in improving both patient and user outcomes and meet their service requirements.
